1. BUSINESS DESCRIPTION

1.1 Scope

The present guide has been issued to assist the companies of the Apparel (Knitting/Clothing) sector in the implementation of the standard XML document type "GARMENT ORDER STATUS REPORT", providing all the instruction required for its use in any context of e-commerce between Apparel Producers and their Subcontractors.

All the rules required for the construction and validation of the document are embedded into the specific XML-Schema, which is detailed in section "Implementation guide".

1.2 Generalities

The message is issued by the Subcontractor to report to his Client (Apparel Producer) the status of his Commission Orders and the updated delivery dates, with the possibility of splitting an order line into several consignements.

The message may concern all the articles ordered (Type = H "historic"), all the articles ordered and not yet delivered (type = C "complete") or just the articles in the "ready for shipment" status (type = S "for shipping"). For each article, the status report can be consolidated or partial for each Order line.

1.3. Possible scenario

Fashion commission order status

2. IMPLEMENTATION GUIDE

2.1 General structure of XML document

All the business data that can be exchanged through this class of documents are shown in the following "document structure", that provides a simplified vision of the Schema.

In particular:

- the two numbers following each element define its "cardinality" (minimum and maximum number of occurrences); the minimum equal zero indicates that the element is optional, the minimum greater than zero indicates that is mandatory;
- the bold character denotes the complex elements (aggregates of simple elements) that were built for the sake of functionality and re-usability of some complex informations sets. The child elements in each parent element are easily spotted as "indented";
- the symbol "@" denotes an attribute of the preceding element; here "the usage indicator (optional, required, ...) is shown in square brackets.

Legenda

- N: new element
- U: updated properties
- P: changes in children
- p: is a changed child
- A: changes in attributes
- a: is a new or changed attribute
- *: is a subtype
