1. BUSINESS DESCRIPTION

1.1 Scope

The present guide has been issued to assist the companies of the FASHION sector in the implementation of the standard XML document type "FASHION MASTER DATA", providing all the instruction required for its use in any context of e-commerce between Brands, Apparel Producers, subcontractors or logistic or retail organisations.

All the rules required for the construction and validation of the document are embedded into the specific XML-Schema, which is detailed in section "Implementation guide".

1.2 Generalities

The message can have various uses: for example it can be issued by the Supplier of goods to communicate the technical-logistical characteristics of an article that the Receiver will receive; otherwise it might be issued by the Brand to communicate the technical characteristics of an article to the Subcontractor that he will receive to transform or which he will have to produce.

The sender forwards this document when he has to feed a registry of the characteristics of the goods that will then be treated in some way (sold or stored or processed for example).

The main function of the message is to provide information of various kinds: logistics (dimensions, packaging, handling, stackability), commercial (category, line or group of products), technical (size, treatments, ..), operational (eg CITES).

2. IMPLEMENTATION GUIDE

2.1 General structure of XML document

All the business data that can be exchanged through this class of documents are shown in the following "document structure", that provides a simplified vision of the Schema.

In particular:

- the two numbers following each element define its "cardinality" (minimum and maximum number of occurrences); the minimum equal zero indicates that the element is optional, the minimum greater than zero indicates that is mandatory;
- the bold character denotes the complex elements (aggregates of simple elements) that were built for the sake of functionality and re-usability of some complex informations sets. The child elements in each parent element are easily spotted as "indented";
- the symbol "@" denotes an attribute of the preceding element; here "the usage indicator (optional, required, ...)" is shown in square brackets.

Legenda

- N: new element
- U: updated properties
- P: changes in children
- p: is a changed child
- A: changes in attributes
- a: is a new or changed attribute
- *: is a subtype
